

Your data never leaves **your perimeter.**

For engineering teams who can't send proprietary documents to third-party AI vendors. SpecSense ships in three deployment tiers so you can run the exact same engineering-review intelligence inside the perimeter that your clients, regulators, and policies require.

THREE DEPLOYMENT TIERS

1 SwiftModa SaaS WHERE IT RUNS SwiftModa EU/Frankfurt (Supabase + Vercel) SETUP TIME 15 minutes DATA RESIDENCY EU (Frankfurt) · AES-256 · TLS 1.2+ AI ACCESS OpenAI / Anthropic / Google — paid API tiers, no training on your data From £299 / month Chosen when: security team accepts commercial SaaS controls (Office 365 / Salesforce model) and you need to move fast.	2 Private Cloud WHERE IT RUNS Your AWS / Azure / GCP tenant, any region SETUP TIME 1–2 weeks DATA RESIDENCY EU, UK, UAE, Saudi (Riyadh), US regions all supported AI ACCESS Azure OpenAI / AWS Bedrock / Vertex AI — in your tenant, zero egress From £1,500/mo + your cloud compute Chosen when: client contracts require data in-tenant or corporate policy mandates AI in your cloud.	3 On-Premise / Air-Gapped WHERE IT RUNS Your rack, your building, your country SETUP TIME 3–6 weeks DATA RESIDENCY Air-gapped — no inbound or outbound internet required AI ACCESS Local open-weight models (Llama 3.3 / Mistral / Qwen) on 1× H100 or 2× A100 £35,000 install + £800/mo Chosen when: defence, NOC-adjacent, or corporate policy forbidding any external service.
--	--	---

CONTROLS THAT APPLY ACROSS EVERY TIER

✓ No cross-tenant data flow Each customer isolated at DB layer. Postgres row-level security on SaaS; separate instances on Private Cloud and On-Prem.	✓ No training on your data Contractual guarantee. LLM providers use paid API tiers that exclude submitted data from model training.
✓ Full audit logs Every review request, model call, output, and user action logged with timestamp and user ID.	✓ CEng sign-off available Reviewed-and-signed tier delivers outputs stamped by a UK Chartered Engineer (CEng MIMechE).
✓ DPA on signing Standard Data Processing Agreement at contract. Custom clauses negotiable at Private Cloud and On-Prem tiers.	✓ Export + delete, anytime Full data export on request. Full erasure within 30 days of written request. No lock-in.

WHICH TIER FITS YOUR ENVIRONMENT?

QUESTION	SAAS	PRIVATE CLOUD	ON-PREM
Already running cloud workloads in your own AWS/Azure/GCP tenant?	—	✓	—
Client contract forbids data leaving a specific region or tenant?	✗	✓	✓
Corporate "no third-party AI vendors" policy?	✗	partial	✓
Environment air-gapped or behind government-grade firewall?	✗	partial	✓
Want zero infrastructure management on your side?	✓	✗	✗

Default recommendation: start on SaaS for a 30-day evaluation on non-sensitive documents. If output quality earns wider rollout and your security team requires it, migrate to Private Cloud. On-Prem is for environments where perimeter constraints are hard requirements.

Walk through your specific environment

20 minutes with a Chartered Engineer. We map SpecSense against your perimeter, data-residency constraints, and procurement checklist.
